PREFACE

INTRODUCTION

The **CINAHL Subject Heading List** contains all the terms currently used to provide subject access in the **Cumulative Index to Nursing & Allied Health Literature**.

The reconstruction of the Subject Heading List in 1983 was a continuation of plans that culminated in computerized access to CINAHL in 1984. The most fundamental change made was the addition of tree numbers to each heading; these numbers yield a hierarchical listing that is invaluable for both manual and computer searching.

The Subject Heading List is updated on an annual basis. The changes are described in the *Guide to Subject Heading Changes* in this publication.

ALPHABETIC LIST

The *Alphabetic List* contains all CINAHL subject headings and their cross references arranged in alphabetical order. Citations will be found in the subject section of CINAHL only under the headings that appear in large type. All other entries are cross references leading the user to authorized CINAHL headings.

Cross references are of two types:

1) *See* references refer from terms not used to valid CINAHL headings. In most cases, the term referred from is synonymous to the preferred term. The references appear in lower case and the preferred CINAHL term in upper case, e.g.,

   Bonding, Parent-Infant *see* **PARENT-INFANT BONDING**

   The "x" symbol listed under a valid CINAHL heading indicates a backwards see reference, e.g.,

   PARENT-INFANT BONDING
   x Bonding, Parent-Infant

2) *See also* references indicate related CINAHL headings which generally do not appear in the same tree, e.g.,

   HOSPITALIZATION
   see also
   CHILD, HOSPITALIZED

   The "XX" symbol indicates a backwards see also reference, e.g.,

   CHILD, HOSPITALIZED
   XX HOSPITALIZATION

Each heading is followed by one or more alphanumeric codes (tree numbers) which direct the user to the place(s) in the *Tree Structures* where the term is to be found. A dollar sign ($) preceding the tree number indicates either that the heading does not also appear in MeSH or that it appears in a different position within the MeSH tree structures. A plus sign (+) following the tree number indicates that there are additional terms indented under that heading in the tree structure.

Two different types of notes may appear in the thesaurus record:

1) The date identifies what year a term was added as a subject heading.

2) Scope notes provide brief definitions of headings that may be unclear and/or explain the use of subheadings.

The following is a complete sample entry from the *Alphabetic List:*

TRANSFER, INTRAHOSPITAL
$N2.421.353.485.867
1983
Formal transfer of an inpatient, usually during a single hospitalization, from one nursing care unit, clinical service, or attending physician to another.

TREE STRUCTURES

The *Tree Structures* list all the CINAHL headings in a subject hierarchy. The trees are composed of 16 broad categories (e.g., Category A = Anatomy) most of which are divided further into subcategories (e.g., Subcategory A7 = Anatomy-Cardiovascular System). The CINAHL terms in each subcategory are arranged hierarchically according to their alphanumeric codes (tree numbers) from the most general to the most specific. Each CINAHL term appears in at least one place in the trees and may appear in as many additional places as are logically appropriate.

CINAHL indexers routinely use the most specific headings available to represent indexable concepts. For example, articles on nurse practitioners working with the elderly will be indexed only under the specific heading GERONTOLOGIC NURSE PRACTITIONERS. They will *not* also appear under the general term NURSE PRACTITIONERS. The CINAHL user who neglects to look up the heading NURSE PRACTITIONERS in the trees may easily miss the more specific, relevant headings indented underneath it.

CINAHL has made limited see also references between headings that appear in the same tree, consequently examination of the *Tree Structures* is the most accurate way to identify many specific headings of interest. Any CINAHL heading that has been assigned a tree number followed by a plus sign (+) should be looked up in the trees since there will be specific headings indented beneath it. CINAHL users may also consult the trees to find additional subject headings that express related concepts whether at the same level, or at higher or lower levels of specificity.

In the *Tree Structures*, each term is followed by a number that indicates its position in the hierarchy. It may also be followed by one or more additional numbers in smaller type that indicate other tree locations for the same heading. These cross reference tree numbers are truncated to the third level.

The trees also contain some terms that are designated (NON-CINAHL). These are included solely for the purpose of clarifying the logical structure of the tree. They are *never* used for indexing and do not appear in the subject section of CINAHL.

The following is a sample section from the *Tree Structures:*

PERMUTED LIST

The *Permuted List* is an alphabetic index of every significant term appearing in a CINAHL subject heading or cross reference. Indented under each entry term is a list of all of the subject headings and cross references which include that term, e.g.:

NURSE
ADULT **NURSE** PRACTITIONERS
Anesthetists, **Nurse** *see* NURSE ANESTHETISTS
CLINICAL **NURSE** SPECIALISTS
FAMILY **NURSE** PRACTITIONERS
GERONTOLOGIC **NURSE** PRACTITIONERS
NURSE ADMINISTRATORS
NURSE ANESTHETISTS
Nurse Clinicians *see* CLINICAL NURSE SPECIALISTS

Each segment of a hyphenated term is considered as one word. For example, the heading EDUCATION, POST–RN is listed under both POST and RN as well as EDUCATION. The only exception to this policy is the term X-RAY which is treated as a single word. Non-significant terms — articles, conjunctions, some prepositions — are not entries. Single letters, Arabic numbers, and Roman numerals are included, however. Entry terms are listed in alphabetical order with Arabic numbers at the end.

The *Permuted List* has a variety of uses:

1) A searcher can locate the appropriate main heading when only one word of the heading is known. For example, the entry term Chemolysis will lead the user to INTERVERTEBRAL DISK CHEMOLYSIS, the authorized CINAHL heading.

2) It provides a link between headings and cross references which might be related but which do not necessarily appear together in either the alphabetic or tree structure list. For example, under the entry term INFANT, one finds such potentially useful headings as PARENT-INFANT BONDING; INFANT, HIGH RISK; and SUDDEN INFANT DEATH. No relationship between these terms is suggested elsewhere in the thesaurus.

3) It displays headings which would be retrieved when doing a text word search in the CINAHL database, and thus allows searchers to identify potential "false drops." For example, a searcher using the term "ventilation" to find articles on mechanical ventilation might be unpleasantly surprised to retrieve information on MIDDLE EAR VENTILATION. Judicious use of the *Permuted List* can help to prevent the retrieval of irrelevant citations.

SUBHEADINGS

TOPICAL SUBHEADINGS

There are 46 topical subheadings (or secondary headings) that can be linked to CINAHL main headings to increase the specificity of indexing. These subheadings help to group together articles on a particular aspect of a topic. TERTIARY HEADINGS

A second group of subheadings exist that are called the tertiary headings. They are distinguished from the topical subheadings (or secondary headings) in two ways. First, they can either be linked directly to a CINAHL main heading OR they can be linked to the end of a main heading/topical subheading combination. For example:

REHABILITATION NURSING/Great Britain or
REHABILITATION NURSING/Education/Great Britain.

And secondly, they can be used in combination with any CINAHL main heading as appropriate.

These tertiary headings fall into two basic subcategories — age groups and geographic headings. Age group exceptions /in pregnancy and /in utero function like other age group headings.

AGE GROUPS

IN ADOLESCENCE - Used for occurrence during adolescence, 13 to 18 years.

IN ADULTHOOD - Used for occurrence during adulthood, 19-44 years.

IN INFANCY AND CHILDHOOD - Used for occurrence during infancy and childhood, birth to 12 years.

IN MIDDLE AGE - Used for occurrence during middle age, 45-64 years.

IN OLD AGE - Used for occurrence during old age, 65 years+.

IN PREGNANCY - Used for occurrence during pregnancy, from conception through puerperium.

IN UTERO - Used for occurrence within the uterus.

GEOGRAPHICS

GEOGRAPHIC NAMES can be used both as subject headings and subheadings. A complete list of the geographics appears in the alphabetic and tree structures in the subject heading list.
